

Supply Chain Assessment And Management

Product manufactures need capable oversight and development of clinical and commercial supply chain logistics to ensure a continued supply of goods to the clinic and the market. We provide logistical oversight from the acquisition of raw materials acquisition at the beginning of the process through to delivery of clinical materials to trial sites for developmental programs and distributors for commercial products.

A Deeper Department

A Regulatory Drug Development consulting business that (works exclusively with) serves the needs of small emerging biotechs, most of whom do not yet have major products approved and on the market (to improve performance in strategy and leadership). Whether advocating CMC strategy, directing CMC operations or developing CMC submission content that represent the best interests of emerging biotech, we focus on the critical CMC and Regulatory issues and build programs that enhance development.

DSI can assist with overall strategy, implementation and on-going supply chain management. Our experts in API (Active Pharmaceutical Ingredient) and Drug Product manufacturing will guide your company through all business aspects that could impact your supply chain, including manufacturing planning, raw material sourcing, materials planning, vendor selection, cost of goods, inventory planning, and supply redundancies and integrity. DSI prepares you for launch, helps brings new manufacturing facilities online and your new products to market.

Services

- End-to-end Supply Chain Assessment and Optimization
- Technology Transfer Planning and Management
